

- Amtech, in response to a Canadian Department of National Defence requirement, has developed standardized tools for conducting explosive charge experiments to measure the effect of various buried charge sizes on equipment and on individuals.
- These containers are rated in accordance with the equivalent explosive content and come in a number of standardized sizes.
- Sizes currently available include 25 gm, 50 gm, 100 gm, 150 gm, 200 gm, 500 gm, 1 kg, 2 kg, 4 kg, 5.7 kg, and 7.3 kg (C4 equivalent) and 6 kg (TNT equivalent).
- Custom sizes are available upon request and are subject to a non-recurring engineering fee.
- These non-metallic containers are manufactured using high-volume tooling which results in low product costs.
- The containers are available for sale to government and accredited private organizations and have been utilized in Canada, in the United States, and in Europe.
